

IT Review

A technology review helps

Every business will need to review the technology it uses. This is good practice as it allows time to think about;

- how you use your IT
- whether it's still fit for purpose
- what you'll need in the future
- are the 'pain points' negatively effecting the team
- and are you getting the best deal?

Talking to an impartial and independent company can also be cathartic - you can vent any frustrations you have about the performance or supplier of your IT.

Organise an IT review for your business

Talking to London Systems during the course of an IT review means you gain the insight of an expert, with no obligation.

We simply provide an alternative view of your situation and it only takes under 1 hour. We'll come and have a chat, a little look around and follow-up with a report and some recommendations.

If you then wish to switch over to us, we'll make that really easy too.

Your IT Review includes

- Discuss your areas of concern
- A look at your network and how it's running
- Your email system
- The applications you use
- Your hardware, like printers and other devices
- The switch or firewall
- File storage capacity
- Security, back-ups and Disaster Recovery planning
- Your internet connection
- Whether you need remote working or any other functionality

And much more.

Your report

At the end of the review, we'll provide a report that captures all of the relevant points. We'll also give ideas and recommendations for improvement. These will be based on what you need - as well as what you want. And if you need anything else, just ask us.
